At this and benefit stream function. For example, restoring scale, the ground water is assumed to discharge evenly incised streams in order to reconnect stream channels to to the stream with no variation along its length. As floodplains, may improve near-stream GSI. Interaction this discharge is a function of the watershed hydrologic may also be improved by incorporating permeable setting, including ground water storage characteristics sediments in stream beds and banks in place of low and climate, watershed GSI is typically not targeted and conductivity strata.
